The screenshot shows the Visual Studio Code interface with a C program named `hello.c` open in the editor. The program is a simple "hello world" application. The terminal window shows the execution of the program, which outputs "hello world". The terminal also shows the output of the `git` command, which indicates that the file has been committed and pushed to the origin.

```
1 #include<stdio.h>  
2 int main()  
3 {  
4     printf("hello world");  
5     return 0;  
6 }
```

```
