Excited to share that I earned a Certificate of Achievement in PromptWars Virtual, presented by Google for Developers and Hack2Skill, for securing a spot in the Top 400 Leaderboard for Challenge 3!
This challenge was all about building, deploying, and shipping functional, value-driven Generative AI applications — competing against a global field of innovators under the "Build with AI" initiative.
Grateful for the opportunity to sharpen my GenAI and prompt engineering skills through hands-on challenges like this. Looking forward to building more and competing in the next one! 🚀

Spot-on observation. The overlap across Microsoft's naming conventions especially between Viva Insights for workplace analytics and Application Insights in Azure for telemetry frequently causes confusion across teams. Breaking down the functional differences and specific business use cases brings much-needed clarity. Thanks for sharing!
