

Portfolio Building:-

Student Name: Sirigiri Anand Kumar

Cohort: 3rd Semester B.Tech, Computer Science & Information Technology (CSIT),
REVA University

Course Code: B25CS0311

Target Technical Track: Open-Source Systems & Applied AI Integration

Program Analysis & Target Selection

Evaluation Criteria	Program 1: GitHub Campus Experts DOCX	Program 2: Claude Campus Ambassador (Anthropic) DOCX
Track & Focus	Technical Community Leadership, Git/GitHub Ecosystem, & Open-Source Culture	Applied AI Tooling, On-Campus AI Clubs, & LLM Adoption
Target Cohort & Deadlines	Biannual cycle; next application window opens ~February 2027	Annual cycle; application window opens early September
Eligibility Constraints	• 18+ years of age • Active GitHub profile (>6 months) • At least 12 months remaining before graduation	• 18+ years of age • Fluency with Anthropic's Claude API and developer tools • Full-time undergraduate student with valid work authorization

Evaluation Criteria	Program 1: GitHub Campus Experts DOCX	Program 2: Claude Campus Ambassador (Anthropic) DOCX
Primary Benefits & Perks	• Public speaking, community leadership, and event training • Official GitHub event funding and swag sponsorship for student hackathons • Exclusive access to GitHub product teams and a global student leader network	• ~\$3,600 USD financial stipend • Direct product feedback channels with Anthropic researchers and engineers • Dedicated budget to establish and lead on-campus AI developer workshops
Strategic Rationale	Being in the 3rd semester provides the necessary >12 month graduation runway required by the program. It builds directly upon completed Git workflows and open-source contributions to lead developer initiatives on campus.	Directly leverages full-stack and AI prototyping experience. It provides industry backing to run practical developer workshops on prompt engineering, model integration, and ethical AI development.

Actionable 4-Week Preparation Timeline

- **Week 1: GitHub Portfolio & Documentation Polish**
 - Standardize README.md files across all pinned repositories (leetcode-solutions, pockethealth-ai, NagrikSathi) with architectural diagrams, setup walk-throughs, and time/space complexity analysis tables.
 - Enable and configure GitHub Discussions across key repositories to demonstrate open community moderation and peer support.
- **Week 2: Technical Writing & AI Case Study**
 - Author and publish a technical article on Dev.to or LinkedIn outlining systematic prompt engineering workflows and REST API integrations used in real projects.
 - Share the article across student developer channels to invite feedback and engage in technical discussions.
- **Week 3: On-Campus Peer Workshop Execution**
 - Organize and host an informal 45-minute hands-on session for 10–15 batchmates at REVA University on *"Git Fundamentals, Forking Workflows, and Getting Started with Open Source"*.
 - Document the workshop with session photographs, attendance logs, and a shared open-source demonstration repository.
- **Week 4: Video Pitch & Application Finalization**
 - Script and record a concise 90-second video presentation articulating a clear community leadership vision for REVA University (satisfying the GitHub Campus Experts video requirement).
 - Finalize and proofread short-answer essays for the February 2027 GitHub cycle and the upcoming Claude Ambassador cohort.

Technical Community Motivation Essay:-

As a 3rd-semester Computer Science and Information Technology student at REVA University, my focus centers on making systems programming, open-source development, and modern AI tooling accessible to everyday student developers. Across my coursework and personal projects—from solving algorithmic challenges in Java and C to prototyping intelligent web platforms like PocketHealth AI—I discovered that technical growth accelerates significantly through community collaboration rather than isolated problem-solving.

Many early engineering students hesitate to contribute to open-source software or build with modern APIs due to a lack of structured onboarding and fear of complex Git workflows. Having participated in initiatives like GirlScript Summer of Code and hackathon prompt competitions, I understand how structured mentorship transforms passive learners into active contributors. My objective is to bridge this transition on campus by cultivating a collaborative "build-in-public" culture.

Serving as a student ambassador would provide the pedagogical framework, platform resources, and technical support needed to establish hands-on coding clinics at REVA University. I plan to organize bi-weekly workshops breaking down open-source version control, automated tooling, and responsible AI system architecture. Empowering student developers to collaborate in public repositories not only improves local software engineering standards but also prepares peers for global technical opportunities. I am eager to dedicate my energy toward building an inclusive, high-output developer ecosystem within our university.
